

## Dizziness and Vertigo

Thank you to Justine:

In May of 2010, I began to feel dizzy particularly after bending over. This feeling began to get progressively worse until one day I became so ill that I needed to have a friend drive me to the emergency department of the local hospital. After a lengthy wait, I was diagnosed with "benign positional vertigo", a condition that could last up to a year and involve periodic bouts of dizziness particularly after lying down. Even changing lanes in the car affected me. I was truly at a loss as to how I could function in an everyday for months like this.

A friend referred me to Justine VO at CHR. She had experienced great success with regards to treatment for her back. When I first visited Justine she told me that this could take several treatments before I noticed results but she was confident that she could help me.

After one treatment my vertigo was dramatically improved and after two treatments, I was totally cured. Not only did you cure my illness, Justine but you helped me back to a normal lifestyle. Thank you so much.
